Eastern Oak College of Nursing Sciences (EOCNS)

# System Handover Document

Institutional handover of the EOCNS QA Attendance & Student Affairs system

Prepared by Fortunatus Alolote Fayeofori

Version dated 13 November 2026

Live site: https://travis-global.github.io/qa_attendance/

## 1. Purpose of this handover

This document hands over the EOCNS Quality Assurance (QA) Attendance and Student Affairs system from the developer to the college officers who will run it day to day. It explains what the system is, what it stores, who may use it, and how responsibility should be shared. Read this first. Then use the User Manual for step-by-step work.

## 2. What the system is

The system is a web application that runs in the browser (Chrome or Edge recommended). Officers sign in with a PIN. Data is kept on the device for offline work and published to a GitHub repository so every authorised device can see the same institutional records. There is no separate desktop install. Open the live link, sign in, work, then Publish.

## 3. Live addresses

- Live site (use this daily): https://travis-global.github.io/qa_attendance/
- Source repository: https://github.com/travis-global/qa_attendance
- Settings → Documentation & handover — copies of these PDFs on the site

## 4. Who may do what

**Public visitors** see only a limited dashboard summary.

**QA Officers** (PIN sign-in) may: manage students and lecturers; log lectures; run hostel gate reports; manage remedial; open discipline (DSA) records; generate reports; Publish to the repository; change the officer PIN through the proper form.

## 5. Core modules (map of the menu)

**Dashboard.** Overview counts and shortcuts. Public view shows a lock notice until you sign in.

**Students.** Master list: add, edit, import CSV, View (DSA full record), generate filtered register report (PDF/Word/CSV).

**Pending registrations.** Students who self-registered online await Approve or Reject.

**Lecturers.** Lecturer master list for QA logs and hours reports.

**Hostel.** Biometric train/link, gate fee report with editable preview, roster, distribution report, saved runs.

**Discipline.** DSA cases with official REF numbers.

**Attendance sheets.** Class attendance by programme and level.

**Sessions.** Academic sessions that scope programmes and levels.

**Timetable board / editor.** Weekly grid; log lectures from slots; edit course catalogue.

**Daily / Weekly / Monthly QA.** Lecture quality logs and professional reports.

**Remedial.** Enrolment, timetable, logs, weekly and summary reports.

**Reports & export.** Pack exports and lecture report helpers.

**Lecturer hours.** Hours and compliance style reporting.

**Audit log.** Who changed what and when.

**Settings.** Sign-in, Publish, backup/restore, PIN change, documentation.

## 6. Data ownership and Publish

Until you Publish, important changes live mainly on that browser's storage. After a successful Publish, the repository is the shared source of truth. Always Publish after bulk imports, mass deletes, hostel runs you must keep, or end-of-day lecture logging. Confirm Publish disables immediately so you cannot double-send the same push.

## 7. What the college must protect

- Officer PIN (change it if leaked — Settings → Change QA officer PIN).
- Publish worker secrets (managed on Cloudflare; not stored in the public page).
- Student photos and discipline records — treat as confidential.
- Full backup JSON downloads — store offline safely.

## 8. Acceptance checklist for handover

- Open the live site and sign in with the current PIN.
- Confirm student count looks correct after a reload.
- Publish a small harmless change and confirm status shows success.
- Upload a sample gate file and see the editable hostel preview.
- Open one student → View → DSA full record sections appear.
- Download this documentation pack from Settings.

## 9. Developer contact role

System designed and delivered by Fortunatus Alolote Fayeofori. Ongoing institutional operation is the responsibility of the QA office. Technical structure is described in Document 02; daily steps in Document 03; backup in Document 04.
