Eastern Oak College of Nursing Sciences (EOCNS)

Complete User Manual for QA Officers

Every major feature explained step by step for non-technical users

By Fortunatus Alolote Fayeofori · 13 November 2026

https://travis-global.github.io/qa_attendance/

0. Read this first

This manual assumes you can open a website and type. You do not need to know programming. Words in **bold** are labels you should see on the screen. If a button is missing, you are probably not signed in as QA Officer.

Recommended browser: Google Chrome or Microsoft Edge on a computer. Phones work for viewing but a computer is better for Publish and large hostel files.

1. Opening the system and signing in

1. Type or open this address: https://travis-global.github.io/qa_attendance/
2. Wait for the dashboard to load. If an error alert appears, write down the message, press OK, then hard-refresh (Ctrl+Shift+R on Windows).
3. Look for a notice that says features are locked or PUBLIC VIEW.
4. Open **Settings** from the menu (or the login panel when you try a locked section).
5. Type your full name in the officer name field. This name is used on audit records for this session.
6. Type the QA Officer PIN. Click **Sign in as QA Officer**.
7. Confirm you see **Signed in** and your name.

Do not share the PIN on WhatsApp groups. If you think it leaked, change it under Settings → Change QA officer PIN (you need the current PIN).

2. Understanding the menu

After sign-in, the left (or drawer) menu lists the working areas. Only open one job at a time when you are learning.

Dashboard: Summary only. Safe to open anytime.

Students: Everyone on the college master list.

Pending registrations: People who applied online and wait for approval.

Lecturers: Teachers used when logging lectures.

Hostel: Gate files, machine links, boarding fee reports.

Discipline: Official disciplinary cases (DSA).

Attendance sheets: Classroom present/absent sheets.

Sessions: Academic year/semester containers.

Timetable board: Weekly picture of classes; can log from a slot.

Daily QA: Log each lecture for a chosen day.

Weekly QA / Monthly QA: Build period summary reports.

Remedial: Extra classes for students who need them.

Reports & Export: Extra export tools.

Lecturer hours: How many hours were delivered.

Audit Log: History of changes.

Settings: Sign-in, Publish, backup, documents.

3. Students — full guide

3.1 Search and filter

Open **Students**.

Type part of a name or reg number in the search box.

Choose Programme (e.g. Nursing) and/or Level (e.g. 100).

The list and the number at the top update to match.

3.2 Open a student's DSA full record

Click **View** or the student's name.

Read each section: disciplinary cases; hostel runs; class attendance; QA absences; remedial; audit.

Click **Report** on a section to print only that part, or **Full dossier** for everything.

Click Close when done.

3.3 Add a student

Click **+ Add Student**.

Fill name, reg number, programme, level, gender, hostel if known. Photo is optional.

Save. Remember to Publish later.

3.4 Edit or delete

Use **Edit** on the row. Save changes.

Delete only when you are sure. Then Publish from this same device so the repository drops that student too.

3.5 Import CSV

Click the import control. If the file is for one class, select programme and level first.

Choose the CSV file. Columns such as Names, Gender, Reg No, Program are accepted.

If the system finds a possible duplicate or mismatch, confirm each case or leave it in the pending review list.

3.6 Generate register report

Filter the list to the group you need (or clear filters for everyone).

Click **Generate register report**.

Enter the officer's full name.

Type PDF, WORD, or CSV when asked.

Names appear in CAPITAL LETTERS. The report always includes Name, Registration number, and Gender.

CSV downloads immediately. PDF opens a print view (choose Save as PDF in the print dialog if you need a file).

4. Lecture logging and QA reports

4.1 Daily log

Open **Daily QA**. Set the date.

Select the class (programme and level).

Add lecture: course, whether it was Held or did not hold, times, remarks, absentees if required.

Save. Repeat for each lecture that day.

4.2 Weekly and monthly packs

Open Weekly QA or Monthly QA.

Choose the period and class filters asked on screen.

Build the report, then print/download. Always type the releasing officer's name when prompted.

Lectures marked as not held are described as such; they are not counted as delivered sessions in the professional summaries.

5. Hostel module — detailed

5.1 Why there is Train and why there is Report

Train only teaches the system which machine ID belongs to which student. It does not calculate boarding fees. **Report** uses a date range and a gate export to calculate absences and fines.

5.2 Linking students to machine IDs

Open Hostel → Train (or Biometric map at the top of Hostel).

Upload a gate export from the device.

For each unclear name, choose the correct student from suggestions or search by name/reg no, then link.

On the Master hostel roster, use Link ID or Unlink when something was wrong.

5.3 Building the fee report with editable preview

Set Start date, End date, and rate (■ per absent day).

Upload the gate export for that period.

Wait until the green check says the file is ready. The **editable preview** table should open by itself.

In the table, correct any wrong **Name** or **Hostel**.

For each day column, type **P** if the student was present or **A** if absent.

Click **Recalculate from edits** so "Days" and "Fine" update from your marks.

Use **Remove** on a bad line or **+ Add row** to insert someone missing.

When satisfied, click **Confirm edits & download report**.

Publish if this run must be stored for the whole college.

Do not download and distribute a fee list without checking the preview. The preview exists so human eyes catch machine mistakes.

6. Discipline

Open **Discipline**.

Click new case. Enter REF (official reference), subject, type, status, dates, notes.

Save. Print the register when the office needs a paper copy.

7. Remedial

Open **Remedial**.

Connect the remedial session in setup if asked.

Enrol students, add course assignments, build the remedial timetable.

Log remedial attendance on the log sheet.

Produce weekly or summary remedial reports from the buttons on that screen.

8. Sessions and timetable

Open **Sessions** to create or activate the academic session (programmes and levels included).

Use timetable editor to place courses on weekdays and hours.

Timetable board shows the week; officers can start a log from a slot when that feature is enabled.

9. Publish — sharing with other computers

Think of Publish as “save to the college central shelf.” Until you Publish, another laptop may not see your new students or lecture logs.

Go to **Settings** while signed in.

Click **Publish all data to repository**.

Read the explanation box (how publish works).

Enter PIN → **Confirm publish all**.

The button goes grey and says Publishing — wait.

Read the status line. Success means done. Failure means fix the stated problem and try again.

Do not switch off the computer in the middle of Publish.

10. Backup and restore

Settings → Full backup & restore → download backup after major work or weekly.

Keep the file on a safe USB or drive with the date in the filename.

Restore only when instructed or when recovering a broken browser profile; then verify counts; Publish with care.

11. Pending online registrations

Open **Pending registrations**.

Open a row, check the photo and details.

Approve to master list or Reject with a reason (PIN may be required).

12. What to do when something goes wrong

Cannot see Students menu content: Sign in again.

Report not ready: Hard-refresh to load the latest program files.

Publish failed: Copy the status message. Check internet. Confirm PIN. Try once more.

Hostel preview empty: Confirm start/end dates and that the file is a real gate export.

Wrong student on machine: Unlink and link again; use clarify queue.

Still stuck: Screenshot the error, note the time, and contact the officer responsible for the system or the implementing developer with that screenshot.

13. Good daily habits

Sign in once at the start of work.

Log lectures the same day they happen.

Publish before you leave if you changed anything important.

Do not use two browsers on two devices to edit the same student at the same second without Publish in between.

Treat student photos and discipline text as confidential.

14. Document control

Manual version date: 13 November 2026. Matches the system handover package in the docs folder and Settings → Documentation & handover.
