Eastern Oak College of Nursing Sciences (EOCNS)

Maintenance, Backup & Recovery Guide

Routine care, backup, restore, and recovery

Prepared by Fortunatus Alolote Fayeofori

Version dated 13 November 2026

Live site: https://travis-global.github.io/qa_attendance/

1. Routine maintenance

- Publish at least at the end of each working day when any master data changed.
- Download a full backup weekly to offline storage.
- Review pending registrations and biometric clarify queues weekly so reports stay complete.
- Rotate the QA PIN if staff change or exposure is suspected.

2. Backup

Use Settings → Full backup to download JSON including students (and photos if stored), discipline, QA logs, audit, remedial, hostel runs, timetables, and config snapshot fields. Label files with the date. Keep at least three recent copies.

3. Restore

Step 1. Only restore when you intend to replace local browser data with the backup file.

Step 2. After restore, verify counts (students, sessions).

Step 3. Publish if the repository must match the restored content — with care; publish guards block reckless bulk erase.

4. Recovery if a device shows old data

Prefer Settings reload / focus sync after a known Publish elsewhere. Hard-refresh loads new program code (app.js version). Do not clear site data unless instructed — that wipes local unpublished work.

5. Worker / GitHub

Publish depends on the Cloudflare Worker URL and keys in config, and a valid GitHub token on the worker. Institution IT or the implementing developer maintains those secrets. Officers only use the PIN and the Publish button.
